PROFILE

Founding Engineer (AI & Product) at Kuvai and creator of Fantasy League Lottery — a live, revenue-generating fantasy sports product designed, built, and grown solo through four draft seasons. Fantasy league commissioner for 15 years. I run product for the AI era: working prototypes over specs, AI agent teams with written guardrails, and instrumentation that compresses thousands of user sessions into daily decisions.

EXPERIENCE

Creator & Product Lead — Fantasy League Lottery

Jan. 2022 – Present

fantasyleaguelottery.com | solo: product, design, engineering, growth

Toronto, ON

- Built and run a revenue-generating fantasy sports product through four draft seasons — 977 commits since 2022 — from weighted draft lotteries with cinematic Three.js reveals to a full commissioner toolkit (keeper reveals, waiver lotteries, league polls, Sleeper league import).
- Reached 8,900+ users and 32,000 page views in a peak draft month (GA4); traffic 10x's every August, and the product is planned around the fantasy calendar — reveal scheduling, lifecycle email automation, and seasonal landing pages.
- Launched a paid Pro tier (Stripe/PayPal) converting free users at 10.7%, driven by gate-reason instrumentation, cohort retention, and checkout-funnel analysis; documented pricing tests and a dated decision log.
- Shipped AI features fantasy players use in production: league constitution Q&A, unbiased dispute rulings, and draft-schedule recommendations built on the Claude API.

Founding Engineer — AI & Product

2024 – Present

Kuvai (AI Applied)

Toronto, ON

- Founding team on an AI-teammates platform — agents grounded in company documents, connected to existing business tools, with human approval on every action; own tech stack decisions, UX/UI, and MVP definition end to end.
- Built LLM document-extraction and reconciliation pipelines for insurance operations using typed structured outputs, with accuracy measured against ground-truth evaluation sets.

Business Data Analyst

June 2021 – Jan. 2023

JC Electrofields Power System Inc.

Manila, PH

- Built 10+ Excel/PowerBI reporting templates for strategic decisions; cut operational and labour costs 5% through exploratory analysis of inventory and labour data.

Area Manager

Feb. 2020 – May 2021

Amazon.com Inc.

Toronto, ON

- Increased station capacity 21% and cut process touch points 50% by simplifying same-day delivery process paths — an additional 134,000 same-day packages dispatched annually.
- Led the top-performing Prime Free Same Day station in Canada, dispatching twice normal volume at 3,500 packages daily with a 98.85% success rate; automated daily reporting from 45 min. to 3 min. with a tool adopted across all Canadian delivery stations.

Engineering & Analytics Internships

2016 – 2023

TTC | Regional Municipality of York | Loblaw | Clearbridge Mobile

Greater Toronto Area

- TTC: eliminated a recurring subway-door failure by modelling mean time between failures (Weibull analysis) and clustering six years of fault records (K-means). York Region: designed and led UAT for a new fleet management system; built an AI document-Q&A chatbot for IT support.
- Loblaw: reduced manual order rate 17% via new safety-stock levels piloted in 3 stores. Clearbridge: automated web/mobile QA with Selenium on an agile product team.

FANTASY LAB — SOLO EXPERIMENTS

Fantasy League Lab <i>Next.js, Yahoo Fantasy API, MongoDB, Redis</i>	2023 – 2025
- League-specific fantasy intelligence, built on the gap generic advice can't close: expert recommendations don't know a league's settings, managers, or roster construction. Imports multi-season Yahoo league history to profile manager behaviour, head-to-head records, and category strengths — plus Reach Rate, an original metric scoring every draft pick against expert consensus. - Third iteration of the same idea: a 2023 PowerBI/Python dashboard over four years of league history, rebuilt into a full product in 2025.	
Pool Reveal <i>Next.js, Firebase, PayPal</i> <i>poolreveal.com</i>	2026
Office pools and prediction games built on one product insight: participants never need an account — every player gets a unique pick link, and the key is the identity.	
League Rings <i>Shopify, ten specialized Claude Code agents</i> <i>leaguerings.com</i>	2026
Championship rings for fantasy leagues, run docs-first: unit economics, go/no-go gates, and a data-privacy firewall written before a dollar was spent; merchandising, copy, SEO, and growth operated by an AI agent roster.	

SKILLS

Product: roadmaps & decision logs, pricing & packaging tests, funnel & cohort analysis, SEO, fantasy calendar planning
Build: React, Next.js, TypeScript, Vercel AI SDK, MongoDB, Firebase, Auth0, AWS (S3, core services), Three.js, Python, SQL
AI: Claude Code (agents & skills) as a daily workflow; Claude & OpenAI APIs in production; LLM structured extraction & ground-truth evals; PII redaction with Microsoft Presidio
Fantasy: 15 years as commissioner; drafts, waivers, trades, start/sit; Sleeper & Yahoo Fantasy APIs; expert consensus rankings data

EDUCATION

George Brown College	Toronto, ON
<i>Applied A.I. Solutions Development – Postgraduate – Dean's List</i>	<i>Jan. 2023 – Dec. 2023</i>
University Of Waterloo	Waterloo, ON
<i>Bachelor of Applied Science Honours Management Engineering</i>	<i>Sept. 2014 – June 2019</i>

AWARDS

DEA Site Champion <i>Amazon.com Inc. – best Canadian delivery station by Delivery Estimate Accuracy</i>	2020
Cited for Excellence × 2 <i>The Regional Municipality of York</i>	2017, 2023
